Magnetic gripper resting device

**/ Use**

The resting device for MALT clamps is designed to be attached to a metal frame using magnets. It enables the clamps to be positioned on the conductors with the aid of an insulating pole.

Once installed on the chassis, this device makes it possible to avoid the need for a pair of pliers when fitting the MALT/CC. All you have to do is place the clamp with an insulating pole on this device, which will hold them in place.

This device avoids any risk to the user when fitting or removing the MALT/CC, by preventing the gripping of each individual clamp.

## / Technical specifications

- **Product kind** : Earthing equipment/kits
- **Field of use (environment)** : Station office
- **Station office** : Before electric meter
- **Before electric meter** : Cabinet
- **Composition** : Barreau aluminium pour maintien des pinces et plaque en plastique
