## / DROPOVER

Device for passing a rope over a conductor

## / Use

Pre-arming the device locks a weighted rope onto the Dropover. The Dropover is then placed on the conductor (or any other object over which the rope is to be passed). When the pole is pulled down, the mechanism releases the weighted carabiner, which falls by gravity to the other side of the conductor, taking the rope with it. The Dropover can be completed with :

- Insulating rope
- Ballast
- Soft case

The device can be supplied in a soft case (Optional) :

- Dimensions with soft case : 390x180x90mm
- Weight with soft case : 0,6 Kg

## / Advantages

- Lightweight
- Easy to use
- Fast arming, easy release
- Easy operation even at great heights
- Can be used on any cable cross-section

## / Technical specifications

- Pole kind : Pole accessories

| Product reference  | Designation   |
|--------------------|---|
| <b>DROPOVER</b>    | Dropover alone  |
| <b>DROPOVERHO</b>  | Dropover with soft case                                 |
| <b>DROPOVERVAT</b> | Dropover with antenna for mounting a voltage sensor HTA |
| <b>HDROPOVER</b>   | Dropover for soft case                                  |
| <b>LEST1KG</b>     | 1 Kg LEST   |
| <b>LEST500</b>     | 500 g LEST  |
