/ EOS
Pneumatic gloves tester

See online technical sheet

/ Use

- Recommended for field inspection before/after each use, but also for periodic visual inspection.
- It allows you to check the entire surface of a glove, including the sleeve (according to the recommendations of EN
60903* and IEC 60903).
- The visual and meticulous inspection of the entire surface of the glove makes it possible to detect any perforations or other defects (holes, cuts, important stains, burns, material alterations)
*for Class 00 and 0 gloves, air leakage verification and visual inspection may also be considered suitable for periodic inspection (EN 60903)
- Anti-UV treated ABS body
- Bellows in NBR
- Removable ring Ø 150mm in EPDM

/ Areas of activity

- Cable & Connections
- Electrical distribution
- Industry
- Electric mobility
- Production
- Civil security
- Substation
- Electric traction
- Transport
