Universal boom pole

/ Use

The universal boom pole stand assists in the deployment of all types of telescopic insulating poles. It helps to keep the base of the pole on the ground, using the user's weight, to unfold the insulating pole with the strength of both arms. It is particularly useful for unfolding poles equipped with a heavy tool. The pole is clamped on an EPDM rubber surface. The pedal is non-slip. Compatible poles: all shapes, from 40 to 75 mm diameter.
